

REGIONAL SNAPSHOT: Finger Lakes and Central New York

Health status, health access, barriers to care

Respondents in the Finger Lakes and Central New York regions reported levels of “fair” or “poor” health at 19%, slightly lower than the statewide survey average of 20%. In the combined categories of “very good” and “excellent,” the Finger Lakes and Central New York reported the same level as the survey average, at 46%. Overall, self-reported health among LGBTQ+ respondents in the survey is lower than the population average in New York State, which is 12% “fair” or “poor” health and 57% “very good” or “excellent” health. 47% of LGBTQ respondents in these regions reported mental health concerns half the time or more in the past month, which is almost the same as the average of 46% of respondents statewide. 1% of respondents lacked health insurance and 12% reported that they don’t have a primary care provider. Respondents most frequently selected the following five barriers as “somewhat” or “major” problems in accessing health care services: not enough support groups for LGBTQ+ people (51%), lack of public information about LGBTQ+ competent medical or service providers (50%), not enough health professionals who are trained and competent with the LGBTQ+ community (50%), community fear or dislike of LGBTQ+ people (41%), and inability to afford care (35%). For more details, see Community Survey Report Section 3 (Service areas and access to care) and Section 4 (Overall health and quality of life).

Health status

Note: ‘Mental health issues’ include depression, anxiety, little interest in doing things, and fear for own life.

Insurance provider

Note: Public insurance includes medicare, Medicaid, and military; private insurance includes private employer, private exchange, and private other.

Top 5 barriers to care

Note: % Respondents denotes percent of respondents in region who selected selected barrier as ‘somewhat’ or ‘major’ problem.

Income brackets

Note: Asterisks denote statistically significant difference from statewide percent, per t-test.
* = $p < .05$; ** = $p < .01$; *** = $p < .001$

Note: Due to rounding of percentages, pie chart totals may add to 100%, +/- 1%.

Economic status and vulnerability

63% of survey respondents in the Finger Lakes and Central New York regions reported incomes of less than \$50,000 per year, compared to 55% of respondents statewide. 4% in the Finger Lakes and Central New York were worried that they would run out of food at least half the time, 10% said that they usually couldn’t afford healthy meals, and 6% were housing insecure. 23% had accessed public benefits in the last year. Most respondents (74%) were working part- or full-time, while 7% were neither employed nor in school (and not retired). For more details, see Community Survey Report Section 2 (Community profile) and Section 3 (Service areas and access to care).

Food and housing insecurity

Note: Respondent classified as “housing insecure” if answered “more than half the time” or more to “I did not have enough money for adequate housing” or “I did not have enough money to pay utility bills such as gas, electric or phone bills.” Nationwide food insecurity percentages are from 2020 USDA survey (percent of respondents answering “often” between never/sometimes/often).

Demographics

Survey respondents represented a diverse range of gender identities and sexual orientations. 37% identified as transgender, genderqueer, non-binary, or multiple genders. 17% identified as gay, 21% as queer or pansexual, and 17% as lesbian. In terms of race and ethnicity, 3% of respondents identified as Asian, Asian American or Pacific Islander, 2% Black, 5% Latino/Latinx or Hispanic, 87% White, and 2% multiracial. Finally, 65% of respondents had a college degree. For more details, see Community Survey Report Section 2 (Community profile).
